

Shopiva — Startup Roadmap Summary

Launch-to-Year-2 operating roadmap with Lean Startup principles

Roadmap principle

Shopiva should progress from controlled validation to repeatable marketplace operations, then to growth and expansion. Each stage has a time window, a primary objective, measurable evidence and an explicit Lean Startup learning loop.

Stage 0 — Pre-Launch Foundation | 0–1 month

Make the product and business operationally ready. Establish transaction integrity, analytics, vendor onboarding, policies, support and measurable assumptions.

Stage 1 — Controlled Launch | Month 1–2

Launch narrowly. Prioritize completed and delivered transactions over downloads. Onboard vendors manually and identify the first operational bottlenecks.

Stage 2 — Validation | Month 2–3

Analyze the funnel, interview customers and vendors, identify the strongest segments/categories and establish an initial unit-economics model.

Stage 3 — Trust & Liquidity | Month 4–6

Improve buyer protection, vendor quality, fulfillment reliability, marketplace liquidity and repeat purchasing.

Stage 4 — Operational Scaling | Month 6–9

Turn founder-dependent work into repeatable operating procedures, improve technology reliability, establish ownership and strengthen financial reconciliation.

Stage 5 — Growth & Monetization | Month 9–12

Scale channels that have evidence of working. Build vendor acquisition, customer referral/content systems and evaluate additional monetization using real transaction data.

Stage 6 — Expansion | Year 2

Expand geography, categories and team only after the initial model is sufficiently repeatable. Treat each expansion as a new set of hypotheses.

Lean Startup operating loop

For every major initiative: define the hypothesis → build the smallest useful change → measure behavior → learn from evidence → decide whether to persevere, modify or pivot. Use actionable metrics rather than vanity metrics, and preserve the ability to identify cause and effect.

Executive scorecard

Track GMV, Shopiva revenue, orders, AOV, checkout conversion, payment success, delivered-order rate, refund/cancellation rate, repeat purchase rate, active vendors, vendor retention, CAC, contribution margin, cash balance, burn and runway.

Founder decision hierarchy

Transactions → retention → unit economics → growth → expansion → complexity. The purpose is to ensure that growth in activity does not outrun the evidence that the underlying business model works.

Reference: Eric Ries, *The Lean Startup* (Crown Business, 2011). Concepts applied include validated learning, MVP thinking, Build–Measure–Learn, innovation accounting and pivot/persevere decisions.

Framework reference: Eric Ries, *The Lean Startup* (Crown Business, 2011). This roadmap applies Lean Startup concepts such as validated learning, the Build–Measure–Learn loop, minimum viable product (MVP), innovation accounting, and pivot/persevere decisions. It does not reproduce the book's text.
